RESPONSE TO OFFICE COMMUNICATION

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

In response to the Office Communication mailed on February 9, 2006, Applicants provide the following comments which clarify the meaning of the phrase "absorption atelectasis."

Absorption atelectasis is a well understood phrase in the medical arts. It refers to the tendency for airways in the lungs to collapse when proximally obstructed. When an airway is obstructed, the gasses in the lung region distal to the obstruction will be absorbed into the bloodstream. As the airway is obstructed, replacement gasses will not enter the obstructed, isolated regional lung, and that isolated region will collapse. The process of absorption

atelectasis, however, is slowed by the presence of nitrogen in the air. Nitrogen is poorly soluble in plasma, and thus is absorbed more slowly than soluble gases, such as oxygen. Thus, by washing the isolated region of a lung with an oxygen-rich gas, as described and claimed in the present application, the process of atelectasis will be promoted and the time needed to achieve lung collapse (which is the objective of the present application) will be decreased.

If the Examiner believes a telephone conference would expedite prosecution of this application, please telephone the undersigned at 650-326-2400.

Respectfully submitted,

James M. Heslin Reg. No. 29,541
